

Dear customer!

By choosing our object leather DINO you decided for a technical top quality product. This kind of leather is very durable and easy to clean. DINO is made on German raw hides – and correspond to the worldwide most strict environmental specifications. The compliance to all German quality standards for upholstery leather is guaranteed.

The leather finish bases on a hydrophobization (the fibres are oil-cased) and is perfected by a water based polyurethan dispersion (solvent-free). Completed by this finish DINO guarantees high durability. DINO has proved itself various times during utilisation in the object and living upholstery area.

Cleaning should be done with a duster occasionally and with a moist cloth (not wet!) only once in a while. Serious staining (flan e.g.) should be absorbed with a dry cloth and wiped after with a moistened one until all stains are removed. If stains are already dried (coke, etc.) clean with a lightly moisted cloth. The cleaned parts shall be treated by Intensity Care.

In addition, clean 1 – 2 times a year with Intensity Care generally. This is all what is needed. This treatment supports the light fastness of the leather. Serious dirt is removed by our Intensity Leather Cleaner. After using it, please treat the furniture with Intensity Care.

This product description requires, of course, proper handling of the leather.

If there is any further information needed, we are always at your disposal.

We recommend:

Intensity

Leather Care with light protection for smooth leather
Leather Cleaner for smooth leather
